

Centralised Vacuum Systems

When a mobile vacuum is not enough we can offer you a powerful three-phase fixed vacuum system.

This has a fixed piping suction unit (vacuum cleaner) with suction hoses and tools and comes with optional collection and filter separators.

The main advantages in such a system include:

- Cleaning at a very long distance (up to 100 metres) without moving the suction unit.
- Cleaning efficiency, reaching even the furthest points.
- Simultaneous use of many suction points.
- Reduction of noise levels to minimum level.
- Maximum safety for the workers.
- Automatic remote switching (optional).
