dust and smoke***

Air handling equipment for environmental and health protection

Technical documentation

Air extraction and filtration unit

ASD200.x-09 ULT200-UM.x-HFM010

Use and application

The **ASD200** is suitable for collecting and filtering dry and non-combustible types of dust contained in non-explosive air mixtures. Any emitted and partially unhealthy **types of dust** ought to be extracted by collecting elements directly at their places of origin and be filtered by the ASD200. The combination of the filter stages ensures an effective filtering of the different particle fractions of the dust. Changing the separately filter stages guarantees a longer lifetime for the filters. The precipitation rate of dust is significantly higher than 99 %.

smoke and dusk

Examples

- ⇒ engraving
- ⇒ polishing
- ⇒ abrading
- ⇒ restore / cleaning of works of arts

ULT 200 modular air extraction and filtration unit

mobile unit,
with vacuum and filter modules and cartridge filter system
robust steel housing, powder coated

- filter module RAL 7035, silver grey
- vacuum generator module RAL 7001, light grey

Filter system:

Storage filter system,
filters which are replaced once they are saturated.

Filter technology:

- | | | |
|----------------------------|-----|--|
| (1) Z-line dust pre-filter | | |
| filter class | G4 | coarse dust filter according to Din EN 779 |
| (2) filter mat | | |
| filter class | F5 | fine dust filter, according to DIN EN 779 |
| (3) HEPA filter | | |
| filter class | H13 | HEPA filter, according to DIN EN 1822 |

Components:

Air flow controller
stepless adjustment for the suction power,
Loaded particle filter indicator
optical signal shows the particle filter condition,
Interface SUB D9
standard facilities or optional (depending on the module type)
remote ON/OFF; filter loading 100%; operation status

vacuum module:

High performance blower and turbines with maintenance-free EC-technology
and a turbine with collector in the module UM200.6.

ASD200.x-09 ULT200-UM.x-HFM010

smoke and dust

Functional principle:

At the clean-air side of the filter, a vacuum generator with a high pressure reserve produces a volume flow matched to the respective application.

This volume flow can be individually and infinitely variably regulated. Thus, the polluted air will be reliably extracted.

The **particles** are separated and held back in a multi-stage saturation-type filtering system.

Main filter module HFM010

ULT 200 Filter ASD-01

- (1) **coarse dust filter** Z-line Dust pre-filter
- (2) **fine dust filter** filter mat F5
- (3) **particle filter** HEPA H13

This excellent filter efficiency makes it possible to recirculate the **filtered air** and reduce energy costs.

Further additional options can be connected to the ASD200.x-09 unit. These are to be selected according to the respective requirements.

For the extraction and filtration from pollutants varying from this application case, other module combinations are available.
